

areyou safe?

Check the status and location of your staff in an emergency

Overview

areyou safe? is a real-time, secure, web-based staff check-in service, designed to let you know the status and location of your personnel in the event of an emergency. With multi-channel alert and response capability, including voice, 2-way text and a WAP interface, just one message allows each team member to register their situation using a dedicated call-in number. You can monitor their status on a live incident dashboard, with the chance to send them additional information and instructions when you need to.

Features

- > Secure web based dashboard for system configuration
- > Real time situation status reporting
- > Response history log
- > Automatic SMS alert option for confirmation of caller requests and status
- > Group broadcast and 2-way text messaging options

Take control

With built-in flexibility, Are you safe? allows you to quickly group and isolate staff by individual status. And you can also define up-to-the-minute user instructions and caller greeting messages. In addition, because the system is so easy to configure, it can also be adapted for other, non-emergency applications.

Mobile technology for your world

areyou safe? brings peace-of-mind in the most demanding circumstances, with interactive communication you and your staff can rely on. Contact us now and discover what our mobile technology can do for your world.
