

Email to SMS (SMTP)

One of the easiest protocols to implement. PageOne can offer simple SMS and paging messages via SMTP (email) protocol.

PageOne will allocate you a specific domain-name, unique to your organisation, which can be used to send messages direct from your standard e-mail client. The email is delivered to the recipient's mobile phone as a normal SMS text message or pager message.

Benefits:

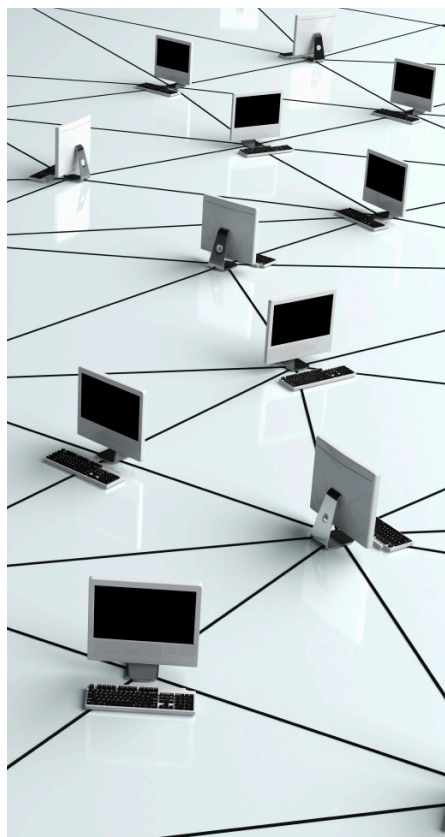

- Easy to use as messages can be sent direct from the familiar environment of your existing email client.
- Send and receive text messages from your desktop.
- Can be used with legacy systems that can output email messages.
- A simple solution that can help you SMS enable your business applications.
- Ideal for server monitoring, system notification messages, web forms and many more applications.

Features:

- No need to install any hardware or software, works with your existing email client.
- Send pager messages to any UK wide paging network
- Send SMS messages globally to any GSM handset.

Connectivity options

In our experience, we have found that it is useful for organisations to be able to offer

different connectivity options to the end user. For example, one of our clients has developed a global alarm-monitoring software product, that can be used to send pager and SMS messages to their customers, throughout the world. They use our technology to do this.

PageOne offer a number of protocols including SNPP, SMPP and SOAP/XML as well as SMTP. This means that customers can choose the best connectivity options for them.

Support

At PageOne we offer free ongoing support to ensure you get up and running quickly. We also offer sample code and free trials to help you find the best match for your organisations

Contact Us

To sign up for SMTP connectivity or one of our other integration options, contact us today on **0844 811 0070** or email **connect@pageone.co.uk** to speak to one of our messaging specialists.
