

## Example Session

Client		Server
Open connection	->	
	<-	220 cage3 v8.06 SNPP server ready at Fri Sep 24 08:57:57 2004
<b>logi</b>	->	
(Password provided by PageOne)	<-	250 Login Accepted
<b>page</b> (6 Digit pager no.)	->	
	<-	250 Pager ID Accepted
<b>mess</b> test message	->	
	<-	250 Message ok
<b>send</b>	->	
	<-	250 Message sent successfully
<b>quit</b>	->	
	<-	221 OK, goodbye

P1C support the entire level 1 command set ie. LOGI, MESS, PAGE, SEND, QUIT, HELP, and RESE.

LOGI is used to supply P1C with a six-character access password

MESS is used to pass the message

HELP displays the command set available.

RESE resets the current session.

SEND and QUIT are self-explanatory.

The numeric 2\*\* numbers indicate successful server responses.
